## Quote for lease of Carmix 3500TC mobile self loading concrete mixer

Looking for the best equipment for your concrete works to lease?

**\$12.000 per month (just \$17 per hour)**

Carmix 3500TC mobile self-loading concrete mixers can produce concrete of any mix design in volume up to 13.8 Cubic Yards per hour. Carmix is equipped with Load Cells electronic weighing system to ensure maximum accuracy in production of concrete and strict compliance with mix design.

CARMIX allows to produce and deliver high quality concrete directly at construction site. There is no need for specific preparation of the job site for installation of any equipment as in case with conventional stationary concrete plants, install or dismantle it and ensure supply of electricity. You also do not need to buy or rent mixers for further transportation of ready mix concrete to construction site or front loader for loading for feeding inert materials to the concrete plant. Carmix will significantly help you lower your costs of production of concrete. The difference in cost of concrete produced by Carmix and concrete ordered from outside suppliers can amount up to 50% of the price of a cubic yard!

## Areas of application of CARMIX mobile self loading concrete mixers:

- Production of concrete at remote construction sites;
- Production of brick mortar;
- Concrete pouring for construction of pile structures;
- Concrete pouring for construction of floors, foundations, base plates, slabs, blocks, support structures of bridges, etc.;
- Concrete pouring for construction of roads, walkways and building surrounding territories;
- Production of precast concrete elements (kerb stones, concrete rings, water wells, light pillars, beams, foundation blocks and pads, trays, staircases and platforms).

## Carmix is ideal construction solution for you as you can:

- save money on each produced cubic yards of concrete.
  - ensure permanent control over quality of concrete mix (electronic weighing system).
  - be independent from local concrete monopolies as you have your own production
  - produce concrete at remote construction sites
  - discharge concrete to all four sides of rotating mixing drum
  - rely on high level mobility and possibility of relocation of machine from one construction site to another.
- 
- expected output of up to 10 Cubic Yards per hour or up to 100 Cubic Yards per shift
  - All work is carried out by only one operator, thus allowing you to save on wages and taxes
